The Horizontal Falls are a natural phenomenon influenced by fluctuating tides that vary on a daily basis. As this is the case, operations only take place when the predicted tidal movements are not neap, so as to avoid taking guests out when there is the least difference between high and low tide.

The gravitational pull of the moon and the sun affect the Earth's tides on a monthly basis. Neap tides occur in relation to lunar and solar cycles. During either of the two quarter moon phases, when the sun and moon are at right angles to each other and their tidal influences partially cancel each other out, neap tides occur, and the tidal range is minimal. During each lunar month, two sets of neap tides occur.

Dates not in operation due to Neap Tides

To ensure that guests have the best possible experience witnessing the incredible tidal power of the Horizontal Falls, Horizontal Falls Seaplane Adventures will not be operating on the highlighted neap tides dates below.

Mid Tide Days

The power of the Horizontal Falls water flow is determined by fluctuating tidal movements. During mid tide dates, the tidal movements are less notable, meaning the horizontal waterfalls are relatively serene making for a more scenic boat cruise and an opportunity to take in spiritual and historical significance of the area in a more relaxed setting. Please note – respecting local Indigenous beliefs, we only traverse the Wide Gap (first set of Falls) and do not go through the Narrow Gap (second set of Falls) however guests will see the narrow gap at a safe distance. During mid tide days, there will also be less water movement visible in the narrow gap. The experience of the Falls flow will differ from tour to tour every day as we operate in an environment that is different every day.
